## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-21 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The functional recitation in each of the claims regarding the valve: "for closing off communication between said pressure supply passage and said pressure control passage" (claim 1, lines 14-16; claim 10, lines 14-15; and claim 16, lines 12-13) is not enabled by the disclosure. The valve 38 interacts with seat 34 (see Figure 6). However, the pressure supply passage 18 and pressure control passage 20 appear to communicate at all times via port 28 (see Figure 3). It is therefore unclear how the device can function as disclosed and claimed.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Applicant's disclosure is incomplete as discussed supra, to the extent that one of ordinary skill in the art would be incapable of reading the claims in light of the specification. It is unclear how the functional recitation in the claims regarding the valve discussed supra is possible given the structure of the valve body as disclosed. This renders the claims indefinite and also precludes the Examiner from construing the claims with enough precision to make a relevant prior art rejection.

### ***Response to Arguments***

Applicant's arguments filed 11/4/05 have been fully considered but they are not persuasive. Applicant has amended the drawings so that reference numeral 18 (the pressure supply passage) points to a different element in the drawings. However, while the element previously pointed to is apparently never in communication with the pressure control passage, the element currently pointed to is apparently always in communication with the pressure control passage. In both cases, the valve does not affect communication between the two passages, and therefore the disclosure is still non-enabling and the claims indefinite.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
